Subject: 301 Mission Retrofit Monitoring Report 058: Results as of June 14, 2022

CONTEXT
This memorandum summarizes results from the monitoring plan implemented at the 301 Mission property. Instrumentation to monitor the structure prior to, during and after the retrofit was installed in January 2021, including piezometers and extensometers. Settlement markers installed in April 2009 and January 2017, survey prisms mounted on the exterior of the structure in December 2016, and crack gauges installed in April 2009 have also been monitored. This memorandum is for review only. It only contains ongoing monitoring information. This memorandum does not contain recommendations based upon the ongoing monitoring information.

PRESENTATION OF DATA
Figure 01 presents the instrument locations as referenced in later figures.

Figure 02 presents the historical settlement data interpreted from settlement markers installed on the B-1 Level of 301 Mission Tower. In addition, data from surveys performed during the retrofit are included. Figure 03A presents settlement data since the start of production pile installation (May 12, 2021; baseline readings on May 10, 2021) through June 13, 2022. Figure 03B presents settlement data since January 11, 2021, through June 13, 2022. Figure 04 presents current settlement contours (in inches) on June 13, 2022.

Figure 05 presents historical lateral roof deflections in the project north-south and project east-west directions interpreted from survey prisms mounted on the exterior of the Tower, from InSAR data, and from a planar fit of the settlement marker data. In addition, data from surveys performed during the retrofit are included. Figure 06A presents lateral roof deflection data from a planar fit of the settlement marker data and from survey prisms mounted on the exterior of the Tower since the start of production pile installation (May 12, 2021; baseline readings on May 10 and 13, 2021, respectively) through June 13, 2022. Figure 06B presents lateral roof deflection data from a planar fit of the settlement marker data and from survey prisms mounted on the exterior of the Tower since January 11, 2021, through June 13, 2022.

Figure 07 presents the historical groundwater elevation interpreted from piezometer readings at locations near 301 Mission. In addition, data from piezometers installed to monitor groundwater elevation during the retrofit are included. Figures 08 and 09 present groundwater elevation interpreted from piezometer readings in the Marine/Colma Sand and the Old Bay Clay, respectively, for the time period prior to the start of production pile installation (January 1, 2021) through June 14, 2022.
Figure 10 presents extensometer data from within the Tower basement since the start of production pile installation (May 12, 2021) through June 14, 2022. Figure 11 presents extensometer data from Fremont Street since the start of production pile installation (May 12, 2021) through June 14, 2022. Figure 12 presents extensometer data from Mission Street since the start of production pile installation (May 12, 2021) through May 25, 2022. Note that the Mission Street instruments have been offline since about May 25, 2022; work to correct this is ongoing.

CLOSING

Please contact us if you have any comments or questions, or if you would like to discuss the results presented in this memorandum.
